ISO 14021 Self-Declared Environmental Claim of Recycled Content

By this Document we declare:

That the raw material used for the manufacture of new steel for all our Steel Reinforcement and Structural Steel Section Products at 7 Steel UK, consists of 98% recycled scrap steel.

Also that this scrap is 100% sourced through local suppliers based in the UK.

Of the 98% of scrap steel, around 1% is from our own internal pre-consumer waste. Also 14% is scrap diverted from the waste streams of other manufacturing processes in other companies, (such as turnings and scrap from other steel mills and processing plants).

The balance 83% is from other Post-consumer material generated by households or by commercial, industrial and institutional facilities in their role as end users of the product which can no longer be used for its intended purpose.

The scrap is recycled using an Electric Arc Furnace.

This environmental claim is made in compliance with the requirements of **ISO 14021:2016**, and the information provided is accurate, verifiable, and not misleading
